The Perfect Balance Between Security and Architectural Design

No Saw Roll Bar

Hardened steel inserts and rotating pins
provide saw resistance
Free turning collar
Tamper-proof features provide strong
protection against forced entry.

Anti-Bump System

If there is a Force Punch to the key, other
pins set because the top Pin and lower pin
are close together. They might absorb
enough energy they can easily clear the
share line but the one with the anti-bump
pin is hard to get enough energy to clear the
share line. Thus, the cylinder cannot be
turned and the lock will not be opened.
